

# Green Education & Mapping Modules

For more than a decade, Green Map® System has energized communities worldwide to chart a sustainable future. Today, over 500 communities in 54 countries are part of this vibrant eco-cultural movement and more than 360 locally-made Green Maps have been published. To date, dozens of diverse schools and community groups have charted local green living resources, nature, civic and cultural sites using Green Map's award-winning globally shared iconography and adaptable tools.

Green Map System is proud to present our **Energy & Environment Exploration Modules**. With these green education resources, youth can interpret energy and environmental issues from a sustainability perspective through hands on research, investigation, and mapmaking.

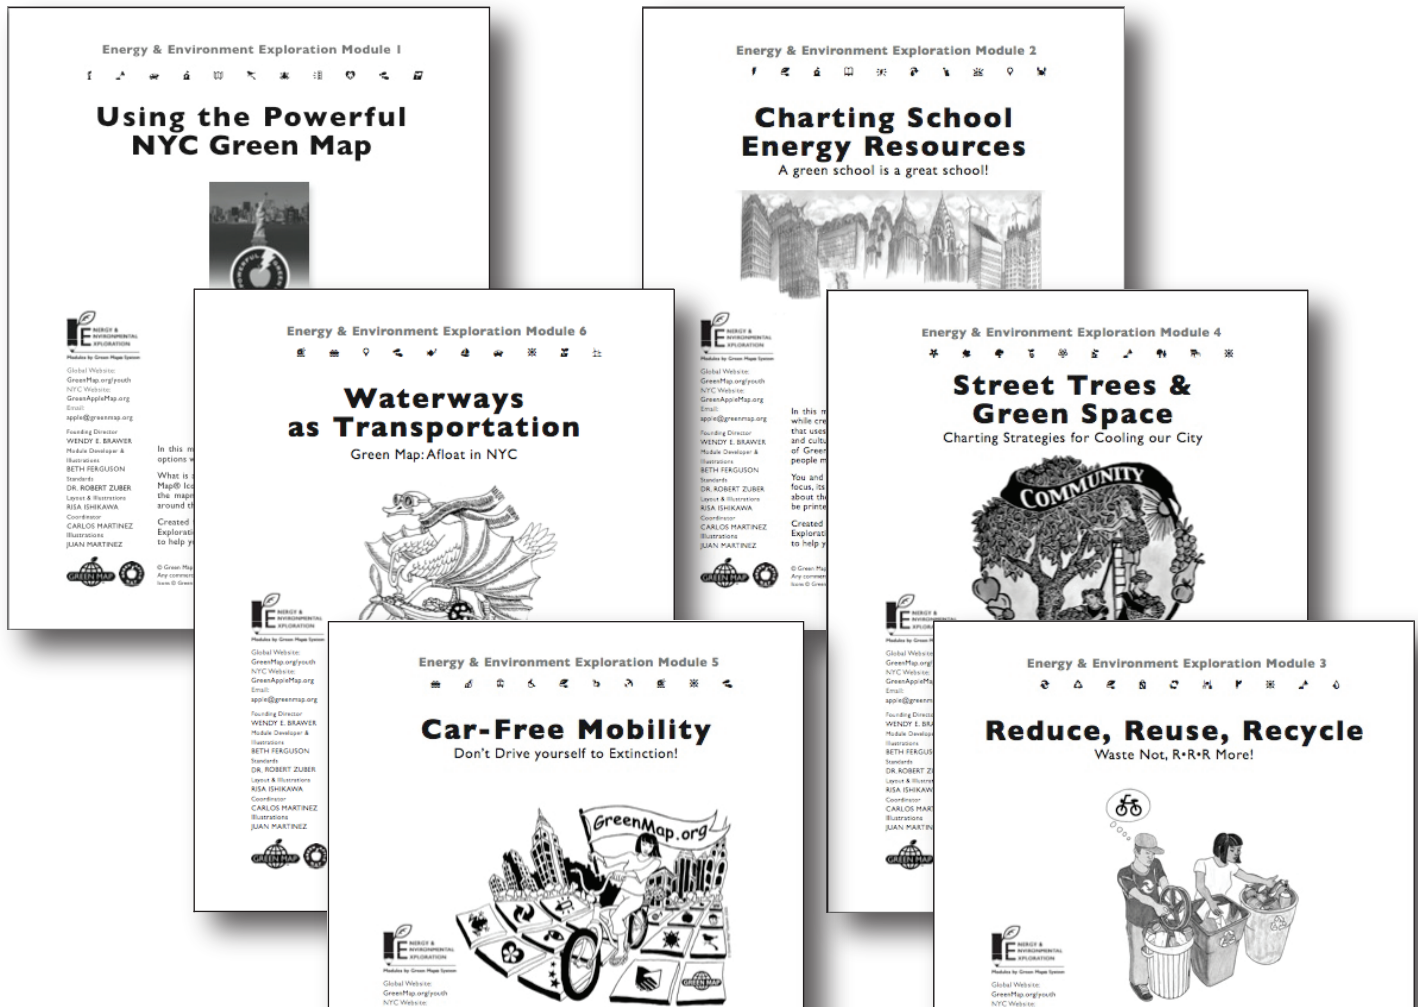

Give this to a teacher or student you know and help spread the word about this innovative resource.
